

a**b**

Information boundary

Learner-visible

reference · feedback · task tolerances
nominal model · trial history · constraints

Hidden plant parameters · noise-free truth · future delay

Learner output next-trial B-spline command

c

Inherited Task-Level ILC principles

- task state, not axis error alone
- sparse critical regions, not equal weighting
- approximate model supplies local direction
- repeated-trial feedback corrects mismatch
- low-dimensional constrained feedforward update
